SUMMARY

DevOps Engineer with 4+ years of experience designing **AWS cloud infrastructure, Kubernetes platforms, CI/CD, GitOps, DevSecOps, and SRE solutions** across financial services and payments. Expertise in **Terraform/IaC, Amazon EKS, GitHub Actions, Jenkins, Argo CD, Helm, Istio, OPA, Backstage, and Python**, improving **infrastructure compliance by 30%** and accelerating provisioning from days to minutes. Experienced with **Snyk, Trivy, SBOM, Cosign, Kyverno, Vault, AWS Config, Security Hub, IAM, RBAC, and mTLS**, reducing high-severity findings by **30%**. Skilled in **OpenTelemetry, Prometheus, Grafana, Datadog, SLOs, and incident response**, improving **MTTR by 20–40%**. Experienced supporting **MLOps and LLM inference** with **MLflow, KServe, vLLM, Karpenter, KEDA, and Amazon Bedrock**, while driving **FinOps and cost governance** with **120K** in **identified annualized savings**.

TECHNICAL SKILLS

DevOps & SRE Practices: Site Reliability Engineering (SRE), DevSecOps, Platform Engineering, GitOps, Infrastructure as Code (IaC), CI/CD, Canary Deployments, SLOs/Error Budgets, Incident Response, Disaster Recovery (Multi-Region DR), FinOps, Compliance as Code

AWS Cloud: Amazon EKS, Amazon VPC, AWS IAM, Route 53, Aurora Global Database, Amazon SageMaker, Amazon Bedrock, AWS PrivateLink, AWS Config, AWS Security Hub, Amazon SQS/SNS

Infrastructure as Code: Terraform, Open Policy Agent (OPA), Helmfile

Containers & Orchestration: Docker, Kubernetes, Helm, Argo CD, Argo Rollouts, Istio, Service Mesh (mTLS), Karpenter, KEDA, Kyverno, Traefik

CI/CD & Build Automation: GitHub Actions, Jenkins (migration to GitHub Actions), Argo CD, DevSpace

MLOps & AI Infrastructure: MLflow, KServe, vLLM, NVIDIA DCGM, GPU Workloads on EKS, LLM Inference

Programming & Scripting: Python, Go, Bash

Monitoring, Observability & Reliability: Prometheus, Grafana, OpenTelemetry, Datadog, SLO Dashboards, Incident Runbooks

Security & DevSecOps: Snyk, Trivy, HashiCorp Vault, Sigstore Cosign, SBOM, SAST, Dependency/Container Scanning, RBAC, Secrets Management, Vulnerability Management, SOX/FINRA/SEC Compliance

Developer Platforms & Tooling: Backstage (Internal Developer Platform), LocalStack, Kafka, GitHub, Linux

PROFESSIONAL EXPERIENCE

Goldman Sachs | NJ | DevOps Engineer (Platform)

October 2025 – Present

- Engineered reusable **AWS infrastructure** with **Terraform/IaC** across **70+ VPC, IAM, and EKS resources**, enforcing **OPA** policies and standardizing engineering, quantitative, and ML environments, improving infrastructure compliance by **30%**.
- Modernized **CI/CD** by migrating **40+ repositories** from **Jenkins to GitHub Actions** and implementing **GitOps** for **20+ Kubernetes** services with **Argo CD, Helm, Argo Rollouts, and Istio**, improving build times by **25%** and deployment consistency.
- Integrated **DevSecOps** controls using **Snyk, Trivy, SBOM, Sigstore Cosign, HashiCorp Vault, Kyverno, AWS Config, and Security Hub**, embedding vulnerability scanning, policy enforcement, and compliance checks into workflows, reducing high-severity findings by **30%**.
- Improved platform **observability and reliability** with **OpenTelemetry, SLOs, error budgets, Route 53, and Amazon Aurora Global Database**, strengthening monitoring across **15+ services**, improving **MTTR by 20%**, and reducing recovery time from **90 to 60 minutes**.
- Supported **MLOps and LLM inference** on **EKS** using **Karpenter, KEDA, NVIDIA DCGM, MLflow, vLLM, and KServe**, integrating private **Amazon Bedrock** access through **AWS PrivateLink and IAM** for internal AI workloads and improving inference response time by **15%**.
- Launched an **Internal Developer Platform (IDP)** with **Backstage** golden paths and **Python-based FinOps** across **10+ clusters**, enabling self-service application/ML provisioning, standardized deployments, rightsizing, and cost governance; identified **120K** annualized savings.

Razorpay | India | DevOps Engineer

June 2021 – August 2024

- Partnered with **development teams** to gather requirements and delivered **Devstack** on **AWS EKS**, provisioning reusable **Kubernetes** infrastructure and dependencies through **Terraform IaC**, reducing environment setup for **150+ engineers** from **2 days to under 30 minutes**.
- Automated **service dependency orchestration** with **Helmfile and Helm**, integrating **LocalStack** for **SQS/SNS, Kafka topics, and database dependencies**, enabling one-command deployments and reducing sandbox infrastructure spend by **~36%** through **FinOps** practices.
- Streamlined developer workflows using **DevSpace, Docker, Linux, Go, Python, and Bash**, implementing automated code synchronization and container refresh workflows that shortened code-to-pod iteration time to **under 5 seconds**.
- Configured **Traefik** ingress with **OpenTelemetry** context propagation for isolated feature-preview environments and implemented **mTLS** through a **service mesh**, enabling secure service communication and independent QA validation.
- Integrated **CI/CD** and **GitOps** with **Argo CD**, embedding **DevSecOps, SAST, dependency/container scanning with Trivy, secrets management, and RBAC**, strengthened the **security platform** with centralized **IAM, vulnerability visibility, and configuration compliance**.
- Established **SRE observability** with **Prometheus, Grafana, and Datadog**, creating health dashboards and **Incident Response** runbooks that reduced **MTTR by 40%**; automated environment cleanup with **Kube Janitor**, lowering idle development environments by **61%**.

EDUCATION

Master's in Computer Science | Pace University, New York City, NY, USA.
